

AI Disaster Incident Response Coordinator - Project Report

Abstract

Automated AI disaster response workflow using n8n, Google Gemini, OpenWeather API, Gmail and Google Sheets.

Problem Statement

Manual emergency coordination is slow. This solution automates analysis, communication and logging.

Objectives

Analyze incidents, retrieve weather, allocate resources, generate summaries, notify responders and log incidents.

Workflow

Manual Trigger → Incident Data → Gemini Analyzer → Weather API → Resource Allocation → Executive Summary → Gmail → Google Sheets.

Tech Stack

n8n, Google Gemini, OpenWeather API, Gmail API, Google Sheets.

Implementation

AI nodes perform reasoning while API nodes provide external services. Outputs are chained through the workflow.

Results

Successful workflow execution with email alerts and spreadsheet logging.

Future Scope

Slack, SMS, dashboards, PDF generation, GIS, multi-agent AI.

Conclusion

Demonstrates practical AI automation for emergency management.
